

TIPS FOR

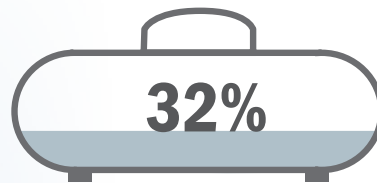

safer and easier

WINTER FUEL DELIVERY

Each year our energy drivers brave the weather to deliver fuel and propane to our customers. It isn't always easy. For your safety, and theirs, we ask that you follow these simple tips.

Mark Your Tank

Tanks can easily be buried in snow during the course of the winter. Mark your tank with an indicator. This makes it easier for your delivery driver to find and fill your tank.

Keep an Eye on Your Tank Level

If your tank reaches 30%, call us and schedule a delivery immediately. Even on an automatic scheduled delivery program, we need you to keep an eye on your levels, unless you have a tank monitor.

Keep Your Regulator Clear of Snow

Don't let snow cover your regulator. Make sure it is clear of blowing and accumulating snow. Packed snow will impact the tank readings and can be a safety concern.

Clear a Path to Your Tank

Your delivery driver can make up to 30-40 deliveries per day. Imagine all that cardio! Shovel or snow blow a path to your tank to ensure your tank is filled in a timely manner.

Plow, Salt and Sand Driveways, Sidewalks and Walkways

In order for our trucks to service you, you must plow and salt or sand driveways so your driver can safely access your property. If the truck can't safely enter, your delivery can't happen. Also, salting sidewalks ensures your safety and the safety of others. If you are looking for a provider, you can order salt directly from our local FS member company.

We proudly support our customers and do everything in our power to provide the best service in our market. Please take a moment to follow these tips to help us serve you better.
